EDUCATION

Bachelor of Engineering – Information Science & Engineering
JSS Academy of Technical Education Bengaluru, VTU 2024 – 2028
CGPA: 9.3/10

EXPERIENCE

Research Intern · IIT Guwahati May 2026
Worked on a digital twin framework for continuous water-quality monitoring and early contamination detection, including fluoride. Modelled the waterbody as segmented regions, ingested IoT-style sensor readings over a TCP client–server backbone into a centralized time-series Data Hub, and kept regional digital twin states synchronized. Applied LSTM-based temporal analysis for normal/contaminated classification with threshold-based alerting.

Core Member, Technical Team · Google Developer Groups · JSSATEB Aug. 2025 – Present
Organised technical workshops and developer sessions and created hands-on learning content for the college community. Organised Selenite, a 6-day technical event that included Eclipse, a two-day national-level hackathon.

PROJECTS

GraphShield — Network Attack-Path Simulator *(React · Spring Boot · PostgreSQL · Docker)* GitHub
Full-stack security simulation platform that models a corporate network as a weighted directed graph and performs attack-path and lateral-movement analysis using BFS, DFS, Dijkstra's shortest path, articulation-point detection to expose single points of failure, and Tarjan's strongly connected components. Spring Boot REST services sit on a Dockerized PostgreSQL layer with stored procedures, triggers, cursors, and an audit-log table, surfaced through a live in-app DB console.

Chitti AI — Role-Free Multi-Agent Swarm Orchestration *(Python · FastMCP · React.js)* GitHub
Implemented the Model Context Protocol (MCP) orchestration layer for a role-free multi-agent swarm built with a teammate. Agents coordinate through a shared memory store instead of a fixed pipeline, converging over three iterative refinement stages (raw → improved → structured). Designed a scoring-and-voting consensus layer that ranks candidate outputs on clarity, practicality, and completeness, inspired by ant-colony swarm behaviour.

Cyclops — Privacy-First Browsing Agent *(Python · FastAPI · Browser Extension)* GitHub
Implemented the browser extension backend for a team-built privacy-first browser agent that uses DOM-first, vision-assisted webpage understanding with local PII detection and redaction. Sanitized context is sent to remote LLM/VLMs for reasoning, while sensitive data and browser actions remain on-device. Built with local vision inference, structured tool execution, and a FastAPI agent backend.

SKILLS

- **Programming Languages:** Java · JavaScript · SQL
- **Frameworks & Libraries:** React.js · Node.js · Express.js · Spring Boot · FastMCP · LangChain · JWT Auth
- **Databases:** & MongoDB · PostgreSQL · LSTM · MCP
- **Tools:** Git · GitHub · Docker · GCP · Postman
- **CS Fundamentals:** DSA · DBMS · Operating Systems · Computer Networks · OOP

AWARDS & ACHIEVEMENTS

- **Smart India Hackathon 2025** — Secured 1st place in the Agentic AI track
- **Smart India Hackathon 2026** — Internal round winner, consecutively secured 1st place from 65+ teams in Secure Browser Agents domain
- **Campus Ambassador, Kshitij (IIT Kharagpur) 2025** — Conducted a pre-event for over 250 members
- **LeetCode** — Contest rating of 1500
